

# CLIPAI - PROGRESS REPORT

1 Juli 2026 | Sesi: Login Email + Admin Dashboard  
Halaman 1/4

Backend FastAPI (port 8000) - Health OK (200)  
Frontend Next.js (port 3000) - Build sukses  
PostgreSQL (port 5432) - running  
Redis (port 6379) - PONG  
Telegram Bot - aktif

Login pake email + password. Password di-hash bcryptjs.  
Gak perlu Google Cloud setup, gak perlu email service.  
Halaman /auth - login + register 1 page, toggle tab.  
Daftar langsung dapet 15 token gratis buat trial.  
Navbar update: email login button + user info + logout.

Cuma owner yang bisa akses (dicek pake ADMIN\_EMAIL).  
Statistik: total user, total token, total payment.  
Tabel semua user: email, name, token balance, payment count.  
Tombol +50 / -10 token langsung dari dashboard.  
API /api/admin/users: GET (list), PATCH (token adjust).

/ - Landing page (Hero + fitur + CTA)  
/auth - Login & register form, error handling, redirect  
/clipper - Input URL, generate clips, hasil  
/pricing - 3 plan (Free/PRO/Enterprise)  
/admin - Owner dashboard (stats, users, token control)  
Navbar - Conditional login/logout, user info

# STRUKTUR LENGKAP CLIPAI

s/clipai/

Halaman 2/4

app/  
  layout.tsx - RootLayout + Providers + Navbar  
  page.tsx - Landing page (/)  
  globals.css - Tailwind v4  
  auth/page.tsx - Login + Register (Suspense)  
  admin/page.tsx - Owner dashboard  
  clipper/page.tsx - Clip generator UI  
  pricing/page.tsx - 3 plan cards  
  api/  
    auth/[...nextauth]/route.ts - NextAuth CredentialsProvider  
    auth/signup/route.ts - POST register + bcrypt  
    admin/users/route.ts - GET+PATCH admin only  
    payments/create/route.ts - Midtrans snap  
    payments/webhook/route.ts - Midtrans callback  
    clips/generate/route.ts - Trigger pipeline  
    clips/[id]/route.ts - Clip detail  
  components/  
    Providers.tsx - SessionProvider wrapper  
    Navbar.tsx - Navbar + auth state  
  lib/  
    prisma.ts - Prisma client singleton (PrismaPg)  
    redis.ts - Redis + BullMQ connection  
    downloader.ts - yt-dlp wrapper  
  types/next-auth.d.ts - Type augmentation  
  workers/clipWorker.ts - BullMQ worker  
python-backend/  
  main.py - FastAPI pipeline (187 lines)  
  prisma/schema.prisma - 7 models (112 lines)  
  public/ai-clipper-blueprint.html - UI blueprint  
  tmp/ - temp files (download, audio, clips)  
  package.json - Next.js 16, NextAuth 4, Prisma 7, BullMQ  
  .env.local - DB URL, API keys, admin email

## DATABASE (7 Models)

User - id, email(unique), name, hashedPassword, tokenBalance(15 default)

Plan(FREE/PRO/ENTERPRISE), accounts, sessions, projects, payments

Account - id, userId, type, provider, providerAccountId, tokens

Session - id, sessionToken(unique), userId, expires

VerificationToken - identifier, token(unique), expires

Project - id, youtubeUrl, title, thumbnail, status, clips, userId

Clip - id, startSec, endSec, viralityScore, storageUrl, tags, subtitleUrl

Payment - id, orderId(unique), amount, tokenAmount, status, snapToken

1. GOOGLE\_CLIENT\_ID placeholder 'xxx' - gak dipake sekarang (ganti Email+Password)

Jadi aman, cuma perlu dibersihin aja kalo mau production.

2. Verifikasi email belum ada - user daftar langsung aktif.

Risiko: bot bisa daftar massal. Solusi: pake Resend (100 email/hari gratis).

Bisa skip dulu buat MVP.

3. Forgot/reset password belum ada.

Pake Resend juga (kirim link reset via email).

Bisa skip dulu - MVP kasih petunjuk kontak admin aja.

4. Rate limiting login belum manual (NextAuth built-in tipis).

Kalo production, tambah express-rate-limit atau di middleware.

5. Midtrans key asli - masih placeholder di .env.local.

Perlu diganti pake key production Midtrans biar payment beneran jalan.

6. R2\_PUBLIC\_URL kosong.

Sekarang link video pake presigned URL (expired 7 hari).

Kalo mau video bisa diputar langsung, set R2 bucket public.

7. Admin email harus diganti ke email lo.

Jalankan: `sed -i 's/admin@clipai.com/email-lo@gmail.com/' .env.local`

8. Belum ada email notifikasi pembayaran (pake Resend nanti).

9. Belum ada cron cleanup tmp/ - disk VPS bisa penuh dalam 30-60 hari.

Solusi: cron job hapus file tmp/ lebih dari 7 hari.

# TEKNOLOGI STACK

Frontend: Next.js 16 (App Router) + Tailwind v4 + React 19

Auth: NextAuth v4 CredentialsProvider + bcryptjs

Database: PostgreSQL + Prisma ORM v7

Queue: BullMQ + Redis

Transkripsi: Deepgram Nova-2 (Bahasa Indonesia)

Analisis AI: OpenAI/Azure GPT-5.4-mini via chenzk.top

Storage: Cloudflare R2 (S3-compatible)

Payment: Midtrans Snap

Pipeline: FastAPI (Python) - yt-dlp + FFmpeg

File size: ~50 source files, ~1,400 lines

1. Email verifikasi - biar gak kena spam registrasi
2. Forgot password - penting buat user experience
3. Ganti admin email - now: sed perintah di atas
4. Midtrans key asli - biar payment beneran cair
5. R2\_PUBLIC\_URL - biar video bisa diputar public
6. Cron cleanup tmp/ - hemat disk
7. Rate limiting - mencegah brute force login

Login sekarang pake email + password sendiri.

Gak perlu Google, gak repot setup OAuth.

Password di-hash, aman kalo DB bocor.

Admin dashboard tinggal buka /admin (email lo doang).

Token bisa diatur manual dari dashboard.

Build sukses 100% - tinggal isi key asli dan jalanin.
