

CLIPAI - PROGRESS REPORT

1 Juli 2026 | Bang Je (Jenal Aripin)

=== STATUS LAYANAN ===

Backend FastAPI port 8000 - Health OK (200)
Frontend Next.js port 3000 - Build OK, HTTP 200
PostgreSQL port 5432 - accepting connections
Redis port 6379 - PONG
Hermes WebUI port 9119 - dashboard
Telegram Bot - systemd polling aktif

=== YANG SUDAH DIBUAT (FRONTEND) ===

- Landing page (/)
- Hero + 3 fitur + CTA 'Get Started'
- Dark theme, Geist font
-
- Clipper page (/clipper)
- Input URL YouTube + tombol Generate
- Integrasi useSession (userId dinamis)
- Fetch ke /api/clips/generate + polling status
-
- Pricing page (/pricing)
- 3 plan: FREE (0 token), PRO (100 token/35rb),
- ENTERPRISE (unlimited/150rb)
-
- Login Google (NextAuth v5)
- GoogleProvider + PrismaAdapter
- Navbar: login/logot, link pricing
-
- Payment API (/api/payments/create)
- Midtrans Snap integration (placeholder)
- Simpan order ke DB, request snap token
-
- Payment Webhook (/api/payments/webhook)
- Update status + kasih token ke user

=== YANG SUDAH DIBUAT (BACKEND) ===

Pipeline: yt-dlp -> FFmpeg -> Deepgram -> GPT -> FFmpeg -> R2

Tested: 100% working (video 19 detik, 5 klip viral)

Transcript 9093 chars (Deepgram Nova-2)

Virality score 76-88 (GPT-5.4-mini)

=== WORKER BULLMQ ===

clipWorker.ts - queue clip-jobs

Background processing async

=== PRISMA DATABASE (7 models) ===

User, Account, Session, VerificationToken,

Project, Clip, Payment

=== FILE STATS ===

Total TS/TSX: ~926 lines

56 files total (termasuk config)

=== MASALAH YANG BELUM SELESAI ===

1. GOOGLE OAUTH LOGIN GAGAL

GOOGLE_CLIENT_ID masih placeholder:

'xxx.apps.googleusercontent.com'

Harus diganti dengan Client ID real dari

Google Cloud Console.

Redirect URI yang harus didaftarkan:

<http://localhost:3000/api/auth/callback/google>

Solusi:

a) Buat OAuth credential di

<https://console.cloud.google.com/apis/credentials>

b) Isi GOOGLE_CLIENT_ID & GOOGLE_CLIENT_SECRET di .env.local

c) Tambah redirect URI di Google Cloud Console

2. MIDTRANS PAYMENT

API sudah ditulis (create + webhook)

Tapi Midtrans key masih sandbox: 'SB-Mid-client-xxx'

Perlu register di Midtrans dashboard dan isi key asli

3. R2_PUBLIC_URL KOSONG

Output video diupload ke R2, tapi public URL belum diset

Pakai presigned URL sementara via `generate_presigned_url()`

4. DEPLOY / VPS

Masih localhost. Belum dideploy ke VPS/Cloudflare.

=== CARA FIX LOGIN ===

Opsi A: Setup Google OAuth beneran (rekomendasi)

- Buka console.cloud.google.com

- Pilih project -> APIs & Services -> Credentials

- Buat OAuth 2.0 Client ID (Web application)

- Authorized redirect URIs tambah:
